WebRTC

WebRTC stands for

Web 

Real-Time 

Communication 

It is a collection of API's that allows direct connection between the browsers which allows them to exchange files and any type of data

WebRTC

- Created by Google in 2011 🔥
- Allows **direct-connection** between browsers 🤝
- Used to capture and optionally stream **audio/video media** 🎤
- No plugins or third-party software required 👍

Why WebRTC ?

- Open Source 
- Fast 
- No Plugins Required 
- Easy to implement 
- Compatible 
- Secure 
- High Performance 
- Low Latency 

Major API's involded in this process :

- **MediaStream:**

Capture audio and video stream

- **RTCPeerConnection:**

Send the captured audio and video stream

- **RTCDataChannel:**

Transmit Data

Compatible Browsers
